SOLVO IMPLANTS

BRITISH QUALITY

2021 CATALOG

SOLVO Dental Implants Company is a well established, technologically innovative British company. Implementing the knowledge and experience derived from our R&D team, SOLVO can offer dental implant solutions to meet the needs of today highly demanding dental restoration field.

SOLVO Implants manufactures and supplies a comprehensive range of implants with state of the art SLA surface treatment.

SOLVO Implants continuously strives to design, develop and manufacture implants and prosthetics of the highest quality by implementing the latest advancement in implant science.

SOLVO Implants market a comprehensive range of dental implants and superstructures.

SOLVO Implants surface treatment is carried out by one of the worlds leading laboratories who have over ten years experience and have produced thousands of implants with a high level of success. SOLVO Implants maintain a meticulous quality control system and complies with major quality control standards.

The implants, prosthetics and accompanying aids manufactured by SOLVO Implants, naturally integrate into the body, reduce healing time, minimize rejections, prevent complications and provide durability for years. The surface of all SOLVO's implants undergo a complex procedure which significantly increases the success of the osseointegration process.

The SOLVO Implants consulting team offers all-round professional and technical support. SOLVO Implants continuously strives to improve its products and simplify your procedures, providing the patients with reliable long-lasting successful results.

*All specifications in this catalog are subject to change without prior notice. All models shown are for simulation purposes.

SOLVO Implant Surface & Osseointegration

SOLVO® SLA Surface Treatment

SOLVO SLA Surface provides faster bone recovery and immediate loading success rate.

SOLVO SLA complex surface design with significant surface enlargement enhances the procedure and provides:

- Increased primary stability with reduced healing time
- Active support of bone attachment
- Higher wettability with blood/high affinity for blood
- Early loading / immediately loading
- Higher osteoconductivity of the surface

SOLVO® IMPLANTS HAVE LIFE TIME WARRANTY

SOLVO®

SLA Surface Treatment

SOLVO Implants focused its research on the factor of surface roughness and we used various techniques in order to compare our results with the best, universally recognized implant manufacturers. The following results were obtained through metallographic implant surface cross-section analysis in two locations: the base and at the end of the implant. The analysis accurately determined the depth and width of the dimples, as well as their geometry which is clearly visible on the image bellow. The surface is well-developed with large and small dimples which enhance osseointegration.

SOLVO® SLA surface treatment introduces much improved osseointegration by penetrating all of the pores and providing a strong bone anchoring to the surface (high Bone -to implant contact - BIC).

Advantages

- Optimal roughness characteristics
- Proven long-term solution
- High primary stability
- Rapid bone ongrowth
- Reduce healing time
- Early implant loading

Quality and Performance Tests

SOLVO® SLA Surface stimulates active bone tissue growth throughout entire implant surface resulting in rapid bone growth. the increased surface area provides perfect bone-implant connection. Due to this advantage the implant has higher primary stability and quick osseointegration. It can be used with one or two stage protocol.

SOLVO Implants periodically performs various quality assurance tests.

SOLVO Implant Surface & Osseointegration

SOLVO Implants Surface is the latest generation of dental implant surfaces. SOLVO Implant System provides an ideal tight connection between the implant and abutment.

Researches show that SLA Surface stimulates bone tissue growth throughout entire implant surface, which provides high mechanical stability and osseointegration in much shorter terms.

These unique properties of the surface allow performing rehabilitation at an earlier stage as well as significantly reduce the risk within implant installation under one stage protocol.

Several implant-related factors such as implant surface topography, and surface roughness influence osseointegration. Titanium implants with adequate roughness influence the primary stability of implants, enhance bone-to-implant contact, and increase removal torque force.

The surface roughness of the implants can significantly alter the process of osseointegration because the cells react differently to smooth and rough surfaces: osteoblastic proliferation and collagen synthesis are increased on rough surfaces.

SOLVO Implants focused its research on the factor of surface roughness and we used various techniques in order to compare our results with the best, universally recognized implant manufacturers.

SOLVO SLA Surface Advantages

Rapid Osseointegration

The implant's initial stability is generated by the mechanical locking of the screws themselves regardless of surface features. Surface qualities are very important for maintaining mechanical stability, mainly for the soft bone and for immediate loading. The biological factors determine and retain implant stability, so that the implant surface supports the bone's biological healing process. SOLVO SLA Surface induces osseogenesis on the surface, thus accelerating and strengthening osseointegration, as compared to a machined surface.

Osseconductivity

The SOLVO SLA Surface layer enables bone growth directly on the surface, whereas the bone in the machined option only undergoes apposition from the osteotomic region. Histological tests showed that the bone responds faster to SOLVO SLA Surface where osseogenesis follows the screw outline in the initial healing stages => higher BIC, earlier.

Maintaining the implant's mechanical stability

During Week 1 of post implantation healing, the mechanical relaxation of the bone and the remodeling around the implant might impair implant stability and risk its success, mainly in areas of soft bone under heavy occlusal loading. The quick and strong osseointegration achieved with SOLVO SLA Surface maintains mechanical stability during healing.

Contemporary
Hybrid Design

Biocompatible &
Osseoconductive

SOLVO SLA SURFACE ADVANTAGES

- High Primary Stability
- Minimally Invasive Switching
- Built-in Platform Switching
- Increases Optimal Osseointegration
- Faster Healing Process

SOLVO IMPLANT DESIGN

Built-in Platform Switching

- Self-sealing 11° Morse taper joins the abutment to the implant
- Hermetic seal minimizes micro movement reducing percolation of saliva & bacteria
- Abutment keeps the interface away from the bone.

Open Thread

- Protect Bone Necrosis

Apical Design

- Self Tapping
- Ability for path change
- Secure initial stability

Single Pitch Thread

- 0,9 pitch x 0,25 depth x double lead
- Synchronized thread
- Optimized design for Special Su face
- Reinforce fixture strength

Corkscrew Thread

- Aggressive self threading design
- Lower sensitivity to drill size
- Maintains implant path

Helix Cutting Edge

- Powerful self threading
- Change path easily

Unique Clinical Benefits:

- Perfect Esthetics
- Easily stabilized and controlled during placement
- Greater initial placement stability.
- Unique self-drilling capabilities with a redirection ability of the implant during replacement
- Penetration to small diameters
- Minimal Pressure on Hard Bone
- Self-condensing & Self-directing in line of insertion.
- High Bone Condensation properties leading to high initial stability
- Long-term Stability

Material: Titanium - Ti-6Al-4V ELI

Straight Abutment

- Used for making general cement-type prosthesis.
- 11° taper connection enhances safety
- Cross section design prevents prosthetic restoration
- Use the 1,2 Hex Driver
- Tightening torque: Standard 30 Ncm, Mini 20Ncm, Ultra Mini 15 Ncm
- Includes abutment screw

Angled Abutment

Used for the path adjustment of prosthesis at 15° - 25° axial angle

11° taper connection for excellent safety

Functions as a double hex type (X and Y hex types)

Use the 1,2 Hex Driver

Tightening torque: Standard 30 Ncm, Mini 20Ncm, Ultra Mini 15 Ncm

Includes abutment screw

Equator Abutment

Used for making implant retained over dentures

Accommodates up to 40° divergence between two implants

Use the Locator Torque Driver

Tightening torque: 30 Ncm

Ball Abutment

Used for stud-type over dentures

Use the 1,2 Hex Driver

Tightening torque: Standard 25 Ncm, Mini 20 Ncm, Ultra Mini 15 Ncm

Multi-Unit Straight Abutment

Used with esthetic low cylinders and components

Connected to implant by multi-angled abutment carrier

Tightening torque: Standard 30 Ncm, Mini 20 Ncm

(Plastics or temporary coping screw torque: 15 Ncm)

Multi-Unit Angled Abutment

Used with aesthetic low cylinders and components

Connected to implant by multi-angled abutment carrier

Includes multi-angled abutment screw

Multi-angled carrier sold separately

Tightening torque: Standard 30 Ncm, Mini 20 Ncm

(Plastics or temporary abutment screw torque: 15 Ncm)

Threaded Abutment

Used with aesthetic low cylinders and components

Tightening torque: Standard 25 Ncm, Mini 20 Ncm, Ultra Mini 15 Ncm

Ucla Abutment

Use for cases with path and aesthetic and spatial constraints

After customization, dental alloy (gold, non-precious metal) is used for casting

Use a 1.2 hex driver

Packing unit : Abutment + Ti screw

Tightening torque : Standard 30 Ncm, Mini 20 Ncm - Used for cases with path

Exclusive Surgical Set

Upgradable Up To 37 Stoppered Drills

We have mastered the art of simplifying implant technology by developing a surgical kit that fits all our products and implants, abutments and surgical tools. Our surgical kit includes basic surgical instrumentation to advanced therapy tools and is compatible with all our implant systems.

WHY SOLVO UK IMPLANTS ?

SOLVO UK Implants is a British company which offers the dentists the best solutions of the highest quality in dental implants. We develop, manufacture and supply reliable premium implant systems.

SOLVO Implants provide and solve the complex problems of the dental implants for the patients and dentists simple and fast with a high standard service level.

Reliability and Quality

SOLVO Implants conduct continuous and systematic quality control of all products which is confirmed by international quality standards ISO 13485, CE1984.

Lifetime Warranty and Identification

SOLVO Implants provide lifetime warranty on all its products. All SOLVO Implants are assigned with a unique serial number that allows tracking the history of the product manufacturing from the first to the final stage.

Compactness and Availability

We offer a simple and reliable solution for all possible clinical situations. The dentists use only one surgical kit to perform operations on all implant models.

We leverage our experience and Technologies to ensure that our products offer the best value for Money.

Our mission is to make people smiling every day.
